

## **Release Plan**

**Project Name:** Tutor Trade

**Team Name:** Slugademics

**Release Date:** 7/15/2019

**Revision Number:** 0

**Revision Date:** 6/30/2019

**High Level Goals:** The high level goals for this project essentially include having a working web application capable of linking two people with the mutual ability to help one another. A functioning home page with updating notifications as well as a working profile system with data storage are components of this web application.

## **User Stories for Release:**

### **Sprint 1:**

(8) **User Story 1:** As a busy undergrad, I want a fast and efficient login process because I am constantly short on time.

(8) **User Story 2:** As a summer student, I want a profile creation feature to sign in for tutoring services because being able to communicate my needs on the site is important to me.

(5) **User Story 3:** As a student, I want a home page to keep track of my notifications because having a central hub on the site seems like an essential feature.

### **Sprint 2:**

(13) **User Story 1:** As a user of the website, I want to be able to browse the listings as easily and efficiently as possible, because I don't want to be confused by the layout of the website. (Knowledge Board feature)

### **Sprint 3:**

(5) **User Story 1:** As a student I want to be able to edit my profile at will because my needs or information might change.

We expect the "Knowledge Board" to be the most difficult and time-consuming feature of the project, and so we anticipate that it may need to be "bumped down", so that it occupies time not only in Sprint 2, but in Sprint 3 as well.

## **Product Backlog:**

**User Story:** As a user of the site, I would like to have a messaging service available to me so that I can privately converse with potential tutors or tutees. (chat/messaging feature)

**User Story:** As a user of the site, I would appreciate a filtration system so that I can more easily browse the site and find what I'm looking for. (filtration feature)
